

PECFA UPDATE #33
February 15, 2008 PLEASE POST**Assessment Guidance for Sites with Residual Weathered Product**

The Departments of Commerce and Natural Resources have jointly developed and adopted a publication to provide a technical tool for assessing the environmental impacts of weathered petroleum product, i.e. weathered light non-aqueous phase liquids (LNAPL). This guidance includes information on parameters to assess LNAPL, evaluation of those parameters and remedial treatment considerations. The document is not intended to be used for assessing other contaminants, for assessing dissolved contaminant plume behavior, for assessing recent LNAPL releases or for determining remedial actions. If you have questions regarding this publication, you may contact Eric Scott, Department of Commerce, PECFA Site Review Section, at Eric.Scott@Wisconsin.gov or at 608-266-8516; or you may contact Pat McCutcheon, Department of Natural Resources, Remediation & Redevelopment Program at Patrick.McCutcheon@Wisconsin.gov or at 608-275-3241.

The assessment guidance document can be found on the PECFA web page at:
